## **Activity 7.4A: Power Tool Presentation**

### **Materials/Resource Required**

- Internet access

### **Instructions**

This laboratory will allow your group to gather additional information about power tools that are used in agricultural settings.

1. Search online for photos of each of your assigned tools. (Lists to be provided by your teacher.) Note the prices and save copies of the images for use in your presentation.
2. Once you have obtained pictures for all the power tools on your list, create a PowerPoint® presentation that includes a slide for each tool. Each slide should include the tool image, name, use, and price.
3. Choose the five most common tools on your list. Create additional slides containing images only for these same five power tools. Place these five slides at the end of your presentation to be used as an identification quiz for your fellow students.
4. Rehearse your presentation. Each member of your group should be assigned a specific section to present.
5. Present your information to the class, including your tool identification quiz.
